

UNIVERSAL AUXILIARY OUTBOARD STEERING SYSTEM

*Boaters around the world enjoy the **SAFETY AND EASE** of steering their auxiliary engines from their boat's main wheel, with an **unrestricted forward operational view**.*

Simplified Selection and Installation

The new EZ-Steer Universal system consolidates over 1000+ SKU combinations into a streamlined selection process. Available in three convenient sizes—3", 4", and 7" auxiliary offsets—this product simplifies the choice for customers and dealers alike. No more confusion over which kit fits your boat; just pick the appropriate offset and center-to-center measurement!

Product Benefits:

Safety and Convenience:

- Steer your auxiliary engine from your boat's main wheel
- No need to disconnect for main power runs
- Maintains unrestricted operational view

Better Economy, Better Ecology:

- Reduces maintenance and fuel usage due to lighter main/kicker combo
- Less fuel use means less pollution and more savings

Quick Installation:

- Quick and easy installation process
- Includes all necessary hardware and components
- One-year limited warranty against material defects and workmanship

Kit Components:

Each EZ-Steer Universal Kit contains:

- Powder-coated stainless steel main bracket assembly with brass quick disconnects
- Stainless steel self-adjusting connecting rod
- Small outboard powder-coated stainless steel bracket assembly
- Vinyl non-scratch mounting bracket liners and band sleeves
- All necessary hardware for installation

Customer and Dealer Benefits:

Customers: Hassle-free trolling and boating!

- Easier selection process with fewer options to choose from
- Improved fuel efficiency and reduced pollution
- Enhanced safety with the ability to steer from the main wheel
- Fit almost every outboard and sterndrive application

Dealers: Simplified Proven Product

- Simplified inventory management of an existing product with fewer SKUs
- Increased customer satisfaction with an easy-to-understand product line
- More sales with a product that is in high demand

UNIVERSAL AUXILIARY OUTBOARD STEERING SYSTEM

Find Your Fit!

Auxiliary Bracket Offset

With both engines in the down position, measure the front to back distance in inches from the installed quick release on the main engine (circled in cyan) to the vertical edge of the kicker motor when the offset bracket will mount.

Then select the closest offset bracket from the table:
3", 4", or 7".

Center to Center

With both engines down, measure the center to center distance in inches from from engine to engine.

Then select the length that aligns with their measurement:

19-22", 23-26", 29-33", 27-28", 39-46", or 34-38"
