EMP's aluminum propellers are crafted using a hybrid aluminum-titanium material and finished with an environmentally friendly anti-corrosive powder coat. The result is an aluminum propellers with superior strength and longevity.

EMP's stainless steel propellers incorporate ASTM A89-4A duplex stainless steel, offering exceptional tensile strength, corrosion resistance, and a highly polished finish that minimizes surface friction. Each propeller undergoes rigorous quality control, including 3D laser scanning and pitch analysis, ensuring precise performance.

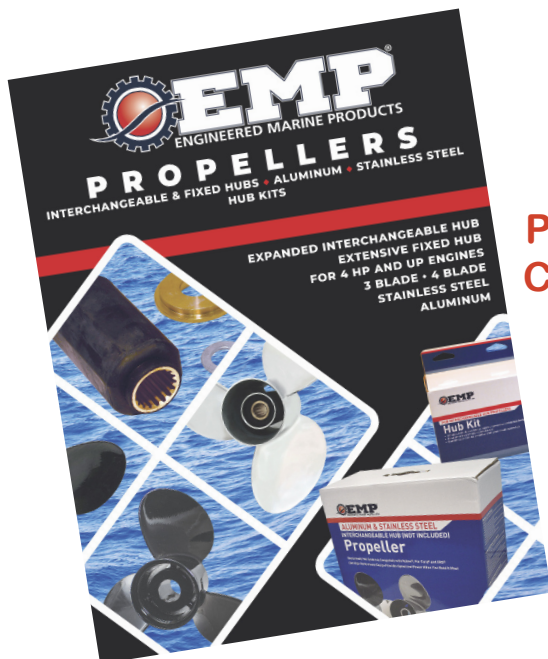

Interchangeable Hub Propellers: Now available in 90 different options, including 3-blade and 4-blade designs for a wide range of applications from 40hp and higher, providing broad coverage with fewer parts to stock.

Fixed Rubber Hub Propellers: EMP's propeller line includes 356 new traditional fixed rubber hub propellers, with extensive coverage for all major brands of outboards and sterndrives from 6hp and up. Featuring 6 distinct blade designs, available in both 3-blade and 4-blade options in aluminum and stainless steel.

EMP propellers are design with advanced cupped and cambered blade configurations, optimizing grip for powerful acceleration, higher top speeds, better bow lift, and peak efficiency.

Leveraging decades of expertise in casting and propeller design, EMP's new propeller line is manufactured in a cutting-edge facility utilizing advanced robotics and aerospace casting technology.

These enhancements ensure a high level of precision, durability, and performance.
